PROFESSIONAL SUMMARY

Results-driven **Java Full-Stack Developer** with a solid foundation in Information Technology and intensive technical training in modern software engineering. Proven capability in designing, building, and deploying scalable, secure, and low-latency web applications using **Java, Spring Boot, React, Next.js**, and **PostgreSQL**. Highly skilled in event-driven systems (WebSockets), database optimization, RESTful API design, and containerization. Passionate about clean code, robust backend architectures, and high-fidelity interactive user interfaces.

TECHNICAL SKILLS

Backend: Java, Spring Boot, Spring Security, Spring Data JPA, Hibernate, RESTful APIs, WebSockets (STOMP/SockJS), JWT Authentication, Microservices.	Frontend: JavaScript (ES6+), TypeScript, React (v19), Next.js (v16), Tailwind CSS (v4), Framer Motion, HTML5, CSS3.
Databases: SQL, PostgreSQL, Neon.tech, MySQL, Database Normalization, Indexing, Transaction Management.	DevOps & Tools: Git, GitHub, Docker, Vercel, Netlify, Render, GitHub Pages, IntelliJ IDEA, VS Code.
AI & Automation: OpenAI API, Natural Language Processing (NLP) Command Parsers, LLM Integration, Prompt Engineering, n8n Automation, AI Agent Pipelines.	

FEATURED SOFTWARE PROJECTS

QuantumOS — Spatial SaaS & AI-Powered Workspace Live Demo GitHub Code Case Study	<i>React, Spring Boot, Spring Security, JPA, PostgreSQL, Docker</i>
Spatial OS UI: Engineered a high-performance in-browser spatial desktop environment featuring a custom Virtual File System (VFS) and resizable, draggable window managers. Sub-50ms AI Mutations: Developed a custom, rule-based Natural Language Processing (NLP) parser in the Spring Boot service layer to parse chat prompts and mutate database records, bypassing expensive LLM calls and reducing transaction latency to under 50ms. Stateless Security: Implemented secure user authentication using Spring Security and stateless JWT tokens, protecting private API routes and maintaining session integrity.	
Succession AI — Real-Time WebSocket Interview Sandbox Live Demo GitHub Code Case Study	<i>Next.js, Spring Boot, WebSockets (STOMP), OpenAI API, PostgreSQL</i>
Low-Latency WebSockets: Engineered a full-duplex communication layer using STOMP over WebSockets (SockJS) to handle real-time chat and coding sandbox events, dropping latency to under 10ms. Dynamic AI Prompts: Integrated OpenAI Chat Completion API with structured JSON output to parse candidate resumes, extract core competencies, and dynamically generate tailored technical questions in real-time. Interactive Sandbox: Built an in-browser coding sandbox featuring instant syntax validation, code execution pipelines, and recruiter analytics dashboards.	

FEATURED SOFTWARE PROJECTS (CONTINUED)

DexterStore — Decoupled E-Commerce Marketplace *React, Spring Boot, Hibernate, REST APIs, PostgreSQL, Tailwind CSS*

[Live Demo](#) | [GitHub Code](#) | [Case Study](#)

- **Decoupled Architecture:** Designed a deeply decoupled system separating a highly cacheable React storefront from a transactional Spring Boot backend.
- **ACID Transactions:** Managed database transactions using **Hibernate ORM** to ensure transactional cart persistence, preventing session data loss and guaranteeing inventory integrity.
- **Role-Based Security:** Implemented role-based access control (RBAC) using Spring Security to secure administrative panels for catalog management.

Cricket Evolution — Immersive Editorial Portal *Next.js 16, React 19, Tailwind CSS v4, Framer Motion, JavaScript*

[Live Demo](#) | [GitHub Code](#) | [Case Study](#)

- **Instant Transitions:** Developed a Next.js portal utilizing client-side view mapping, reducing page transition latency to **0ms** and eliminating server-side reloads.
- **Fluid Animations:** Designed an interactive DRS rulebook simulator and Hall of Fame legend cards using **Framer Motion** and GPU-accelerated CSS transforms.

Movie Explorer — Lightweight Async API Engine *Vanilla JS (ES6), REST APIs, CSS3, HTML5*

[Live Demo](#) | [GitHub Code](#) | [Case Study](#)

- **Async Fetch Pipeline:** Built an asynchronous fetching engine using vanilla JS (`async/await`) to query the OMDb API, enabling background loading and maintaining a responsive UI.
- **DOM Optimization:** Optimized DOM rendering to batch grid reflows, ensuring search results render in under **5ms**.

EDUCATION & PROFESSIONAL TRAINING

Java Full-Stack Development Certification *Jan 2025 — Present (Expected 2026)*

Qspiders — Chennai, India

- Undergoing 500+ hours of professional training in Core Java, Advanced Database Design, Spring Boot APIs, and React client-side architectures.

Bachelor of Science in Information Technology (B.Sc. IT) *2022 — 2025*

SRNY College of Arts and Science — Tenkasi, India

- Focused on computer networking, database management systems (DBMS), Object-Oriented Programming (OOP), and software engineering principles.
